Viaterra

Your fleet at a glance.

Vehicles, drivers and trips. In one program.

Viaterra shows where your vehicles are, how much driving time the driver has left today, whether the cargo is at the right temperature and what the trip earned you. On your computer, phone and the tablet in the cab.

5 languages
for office and drivers

3 screens
computer, phone, tablet

4 vehicle types
trucks, vans, reefers, trailers

Everything a haulier uses every day

Nine areas in one program. They all work together and share the same data.

Tracking

All vehicles on one map

Position, speed and status of every vehicle, live. The program spots what is wrong and lets you know.

Tachograph

Tachograph without visiting the vehicle

DDD files download on their own before the deadline. The dispatcher sees how much time the driver has left.

Trips and customers

A trip that adds itself up

From order to trip, from trip to profit. Meanwhile, the customer sees for themselves where the cargo is.

Reefers and trailers

Cargo temperature under control

The temperature range is read straight from the order. If something goes wrong, you know at once, and the customer gets a log.

Truck navigation

Navigation that knows you drive a truck

Routes by vehicle size and weight, with driving bans and tolls. On the tablet in the cab, in the driver's language.

Fuel and AdBlue

Every litre accounted for

Every fuel card transaction is checked against what the vehicle measured. Anything suspicious is explained in plain words.

Fleet and service

Nothing expires, nothing is forgotten

Documents, service and tyres for every vehicle, with timely reminders.

Drivers and messages

Drivers on the same page as the office

Messages, trips and documents on the driver's phone. No Viber, no digging through chats.

Reports

Reports that arrive on their own

Choose what you want to see and when. The program prepares the report and emails it.

Viaterra TachoStudio

When the tachograph needs checking down to the minute

A standalone Windows program for in-depth analysis of DDD files. It works on its own or with Viaterra: one click in the DDD archive opens the file in TachoStudio.

All files together
driver cards and vehicle units, Gen1, Gen2 and Gen2 v2, thousands of files at once

Infringements by severity
under Regulation (EC) 561/2006, graded under Regulation (EU) 2016/403

Risk score
from 0 to 100, with every point explained

Anomalies and quality
unusual days, missing data, comparison with the fleet

Views and export
charts, map, comparisons, Excel, CSV and HTML

Your data is safe

Data about your vehicles, drivers and customers is your capital. That is why it is protected, backed up and under control, without you lifting a finger.

- **Encrypted connection**
  All data between computer, phone, tablet and the system travels encrypted.
- **Regular backups**
  A full backup every week, with backups of changes in between. Restoring from a backup is checked automatically.
- **Complete history**
  Trips, alarms and the original DDD files stay stored, so you can find them years later.
- **Audit log**
  Who changed, exported or deleted what, and when, is recorded.
- **Everyone sees only their own**
  Companies are kept separate. You set rights by role and by vehicle; drivers see only their own work.
- **Protected login**
  Accounts lock after repeated wrong passwords, and you can revoke remembered logins at any time.

From first call to first trip

We take care of everything. You just start using it.

1
Conversation
Tell us how many vehicles you have and what bothers you most about how you work today.

2
Preparation
We prepare the vehicles and the program for your company.

3
Setup
We enter vehicles, drivers and documents and train you.

4
Go live
You follow your vehicles live, reports arrive on their own.

We'll show you on your own vehicles

Tell us how many vehicles you have and what you need. We'll reply with a proposal and a demo date.
